FREQUENTLY ASKED QUESTIONS

WHAT ARE THE PREREQUISITES?

- Acceptance by the ECE Department. Process requires a sufficient background in mathematics and technical undergraduate studies. Applicants with a BSEE degree will usually satisfy the requirements.
- Command/Company Endorsement.

IS THERE A SERVICE COMMITMENT?

Per OPNAVINST 1520.23C, a naval officer will incur a 1 year service obligation upon completion or withdrawal from the Certificate Program, which is served concurrently with any other service obligation. All students must submit a signed Participation Agreement prior to enrolling in the program.

WHO IS ELIGIBLE?

Applicants with a US government affiliation, government laboratory engineers, active or reserve military personnel, naval civilians, current NPS resident students, and a limited number of contractors sponsored by Department of Defense (DOD) organizations. TS/SCI clearance is required.

WHEN DOES THE PROGRAM START?

Any quarter.

HOW LONG DOES IT TAKE TO COMPLETE?

Usually 3 or 4 quarters, depending upon elective choices.

The Naval Postgraduate School (NPS) offers a graduate certificate program in Cyber Warfare. The program requires three courses and can be completed in three or four quarters, depending on elective choice.

The Cyber Warfare Certificate Program will provide students with a technical foundation that prepares them for assignments related to research, and management of wired and wireless cyber warfare systems.

Students will also be provided with an educational foundation that prepares them for leadership roles in the area of cyber warfare.

“I believe my academic background has prepared me for the challenges of high-level command and complex environments.”
- Gen. Keith Alexander, stand-up Commander, USCYBERCOM and NPS alumnus.

**The Program**

**The Curriculum**

**EC3760 Information Operations Systems (3-2)**
Winter – TS/SCI
This course examines the Network-centric Environment that is the focus of the Information Operations (IO) Infrastructure with emphasis on models.

**EC4765 Cyber Warfare (3-2)**
Summer – TS/SCI
This course explores cyber warfare from an electrical engineering perspective. Rudimentary denial-of-service techniques through intelligent waveform-specific forms of computer network attack (CNA) are covered.

**Elective Courses (Choose one)**

**DA3105 Conflict and Cyberspace (4-1)**
Summer – UNCLAS
Examines how cyberspace can serve as a tool, target, and source of conflict for both state and non-state actors.

**EC3730 Cyber Network and Physical Infrastructures (3-2)**
Fall/Spring – UNCLAS
Cyber infrastructure systems and technologies of interest to the military, government and industry.

**EC3750 Introduction to SIGINT Engineering (3-2)**
Fall – TS/SCI
Signals intelligence systems with emphasis on means for accessing and geolocating signals of intelligence.

**EC4730 Covert Communications (3-2)**
Winter – UNCLAS
Information hiding in user data, protocol data, and radio, electronic, acoustic and other sensory signals.

**EC4755 Net Traffic, Activity Detection, & Tracking (3-2)**
Spring – UNCLAS
Network traffic characterization and management, and detection and tracking of anomalies.

**CS4558 Network Traffic Analysis (3-2)**
Summer – UNCLAS
Analytic techniques for network insight.

**EC3970 Special Topics in Electrical Eng. (Cyber) (3-2)**
Varies – UNCLAS
Cutting edge topics of interest to the community.

**The Outcomes**

Upon completion of the Cyber Warfare Certificate Program, students will possess:

- the cognitive skills required for vulnerability evaluation and exploitation of wired and wireless communications networks and telecommunications systems and the ability to apply these skills to defend cyber systems.
- the ability to apply techniques for attacking computer and telecommunications networks.

And, depending upon elective choices,

- the ability to analyze and evaluate cyberspace activity to identify threats and respond appropriately.
- the ability to analyze, design and evaluate systems for accessing signals of intelligence value in cyberspace.
- the ability to analyze, design and evaluate systems for attack and defense of covert communications.
- the ability to analyze, design and evaluate approaches to maintaining situational awareness in cyberspace.
