Position: Research Assistant Professor, Department of Meteorology

The Department of Meteorology at the Naval Postgraduate School has an opening for a non-tenure track research assistant professor. A research assistant professor conducts research in a specialty field to advance the state of knowledge in that discipline. Specifically, the research assistant professor is expected to:

- Conduct scholarly research and disseminate those results, especially through peer-reviewed means;
- Develop research topics that support graduate education;
- Advise student theses and dissertations;
- Assist in the management of selected research programs;
- Provide some academic service to NPS and to their profession; and
- Have significant off-campus impacts to their profession and appropriate Department of the Navy activities.

For this position, a specialty in tropical meteorology, midlatitude meteorology, or atmospheric dynamics is desired. Additionally, knowledge of advanced statistical and numerical techniques for diagnosis of meteorological phenomena over a variety of space and time scales is required. Candidates are expected to work collaboratively with existing department faculty and staff as well as an independent researcher.

The successful candidate will have:

- An earned doctoral degree in a discipline that supports their research expertise;
- Demonstrated evidence of research aptitude;
- Demonstrated evidence of potential to advise student theses; and
- Demonstrated a strong potential for scholarship.

Applicants should submit a CV and a statement of research interests and capabilities. Review of applications will begin immediately. Application packages and questions should be sent by email or mail to:
