Sex, Lies and Satellites:

Developments in commercial space-based communications for highly mobile users

Join Inmarsat's director of UAV programs, Jack Deasy, for a discussion on the ongoing evolution of commercial satellite systems to improve voice and broadband services for mobile warfighters and disaster response on land, at sea and in the air.

Wednesday, May 11
Glasgow Hall East 203
12:00 - 12:50

Some of the topics that will be discussed include:

- * Key trends in commercial satellite communications
- * Is DoD's current reliance on commercial satellite a stopgap measure or an unavoidable long-term trend?
- * Can high frequency satellites meet demanding theater requirements, and if so, can DoD afford to use them?
 - * Can DoD really rely on commercial satellite solutions for mission critical communications?
 - * Why are satellite communications essential to realizing the full value of social media and Web 2.0 applications in disaster response and other civil-military collaborations?
