

Smartphone Security

April 23rd & 24th | Glasgow Hall East 203 | 1200 - 1300

In this two-part discussion, we'll look at public domain material regarding:

- **Android and Linux Security approaches**
 - Trust anchors
 - Trusted boot
 - Hypervisors
 - Secure OS (lessons from Linux SE)
 - Key Management
 - Application Security
 - Layered Defense
- Stats on smartphone malware insurgence
- Known attacks
- A high level threat analysis
- Preparing for HW and SW trojans
- Learning from personal and enterprise computing

David Wheeler CISSP, CSSLP, GSLC, owner of SecureComm, Inc., has 20 years of cryptography and Information Assurance HW and embedded SW experience on both commercial and NSA certified programs. He architected the Intel Wireless Trust Module for the Xscale Processor and SAMP (Security Associated Management Protocol) which is the predecessor to ISAKMP, and authored several patents in trusted computing.
