Introducing ... The World's First AR Contact Lens

The World's First AR Smart Contact Lens

Tectus Corporation is developing the world's first and only augmented reality (AR) contact lens. Unlike awkward, bulky, and heavy AR goggles and headsets, our technology overlays images, symbols, and text on the real world without obstructing vision, limiting mobility or interfering with productivity. These comfortable contact lenses can be worn all day, are inconspicuous, will display as much or as little information as needed, and with our UX, the user can select what they want to see or do using only their eyes – hands free!

Current Prototype Lens

\$160M in private investment

Corrects Vision | Solves SWaP | Nearly Invisible | Enables Superpowers
