

CIRCLE OPTICS

Real-Time Spherical Image Systems

This is 360 Degree Imaging Today – Barbaric!

360° Spherical Capture Today

- Multiple Cameras
- Uses overlapping fields of view
- Parallax issues in every frame
- High post processing burden
- Not Real-Time
- Intensive SWaP

The Fundamental Problem - Parallax

Higher Resolution = Bigger Parallax

A Problem That's Worth Solving

Capturing Errorless, Real-Time, Spherical Video is Not Possible with Today's Systems:

- Poor Circular capture. No Spherical Capture
- Manual Post Processing and Image Stitching
- Insecure Data Pipeline Integrity

Holding Back Realization of Edge AI and Real-Time Situation Awareness.

The Industry is begging for better capture methods so that Edge Analytics and Immersive Remote Situational Awareness can be made practical.

Our Solution: New Imaging Technology

"You press the button; we do the rest"
- George Eastman

Polygonal Lens Systems

From Our Very First Hardware Prototype - 360° Image Produced Without Any Stitching!

Double Image!

Spherical Imaging Systems by Circle Optics

Our Technological Edge

- Method of Aligning Polygonal Fields of View to Fill 360° Sphere
- Real-Time Image Fusion and Object Detection
- Camera Systems Development Know-How
- Manufacturing Methods and Design Patents
- Platform that is extensible with Technology Partners

Doing “Physics Right” enables

- Volumetric and Other Physical Analytics
- Accurate 3D / Spherical Mapping
- Image Feature Extraction Accuracy and Edge Analytics
- Secure Data Pipeline Beginning at the Source of Capture

Our Differentiators

Our Defensible Technology and Approach

- Closely held Optics Design and Sub-pixel Image Alignment Algorithms
- Methods for aligning Polygonal Fields of View to fill 360° and Spherical space
- Manufacturing and Design Patents
- Extensibility of the Physics and the Platform
- World-class Optics and Imaging Technology Supply Chain
- Camera Development Know-how

Technology Development – TRL 7

Hydra Camera

Field of View	360° h x 300° v
Resolution	72 MP
Frame Rate	30, 60 fps
Color	10, 12-bit
Dynamic Range	72 dB
Distortion	<2%

Medusa Camera

Field of View	360° h x 160° v
Resolution	500MP
Frame Rate	60, 75 fps
Color	14-bit
Dynamic Range	99 dB
Distortion	<2%

We will miniaturize, ruggedize, and/or customize for different Markets, including IR , UV, and LIDAR

Hydra Applications

Medusa Applications

Our Team – Experts in Camera Technology

ZAK NIAZI

Chief Executive Officer
& Founder

IAN GAUGER

Chief Operating Officer

ALLEN KRISLOFF

Director of Engineering

ANDY KURTZ

Director of Research &
Development

LUC VINCENT

Advisor, Creator of
Google Street View

TED SCHIOWITZ

Advisor, Founder of RED Digital
Cinema

- +8 Others with Backgrounds Including IMAX, Kodak, L3 Harris, etc.
- HQ in “The Imaging Capital of the World” - Rochester, NY, USA
- Circle Optics is a privately held Delaware Benefit Corporation
