Hybrid Mesh Networking for Distributed Operations

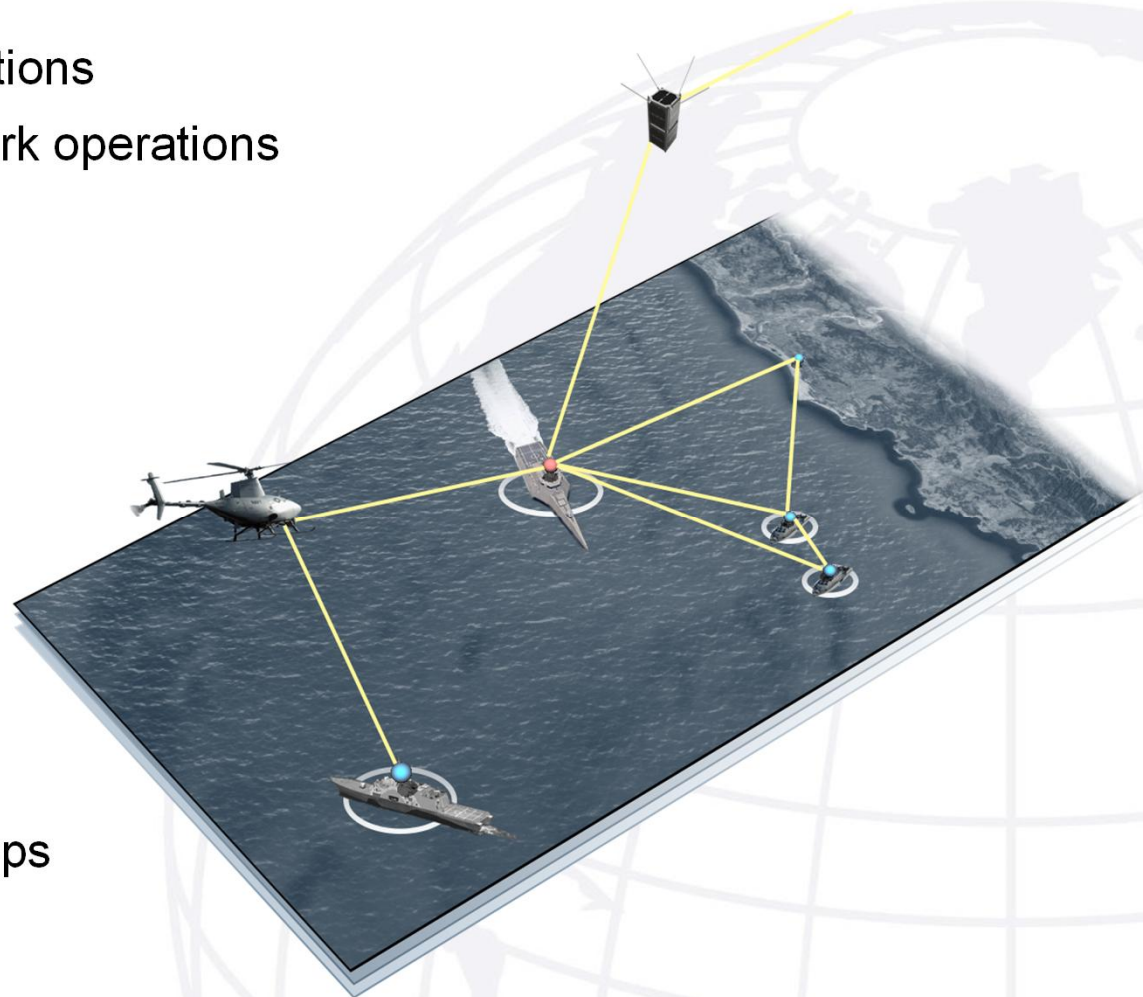

LT M.S. Maupin, USN

OpTech East
Tokyo, Japan

01 December 2015

- Distributed Operations
 - Motivation
 - Dispersed littoral operations
 - Distributed mesh network operations
- Mesh Networking
 - Network topologies
 - Fundamentals
 - Technologies
- Field Experimentation
 - NMIOTC Crete 2015
 - SF Bay 2015
- Tactical Implications
 - Enhancing distributed ops

- Give operational commanders options to employ naval forces in any anti-access/area-denial (A2/AD) environment.
 - Improve offensive capabilities
 - Develop new CONOPs, doctrine and tactics
 - Seek out innovative methods for employing forces

Distributed operations are a complex operating model requiring innovative approaches to Command and Control (C2).

- Littorals are among the most challenging and complex environments for disaggregated or dispersed operations
 - Inherently joint/combined
 - Congested RF spectrum
 - Diverse terrain features
 - Dense commercial and maritime traffic

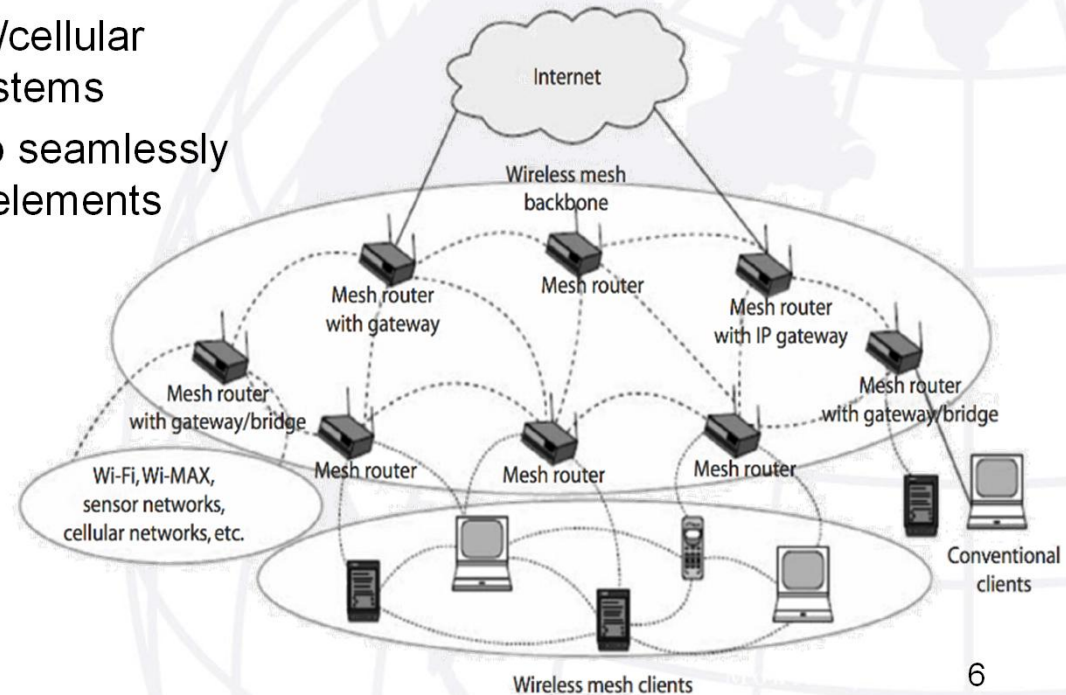

Distributed Mesh Network Operations

- Highly mobile, high-bandwidth data, video and voice communications
- Self-forming, self-healing, scalable peer-to-peer networks
- Connectivity across disparate networks
- Leverage existing infrastructure to enable reachback
 - GIG access through shore 4G/cellular networks or legacy satcom systems
 - Mesh-network-over-IP WAN to seamlessly connect distributed operating elements across geographic areas

Full mesh: each node is directly connected to all other nodes.

Partial mesh: not all nodes are directly connected.

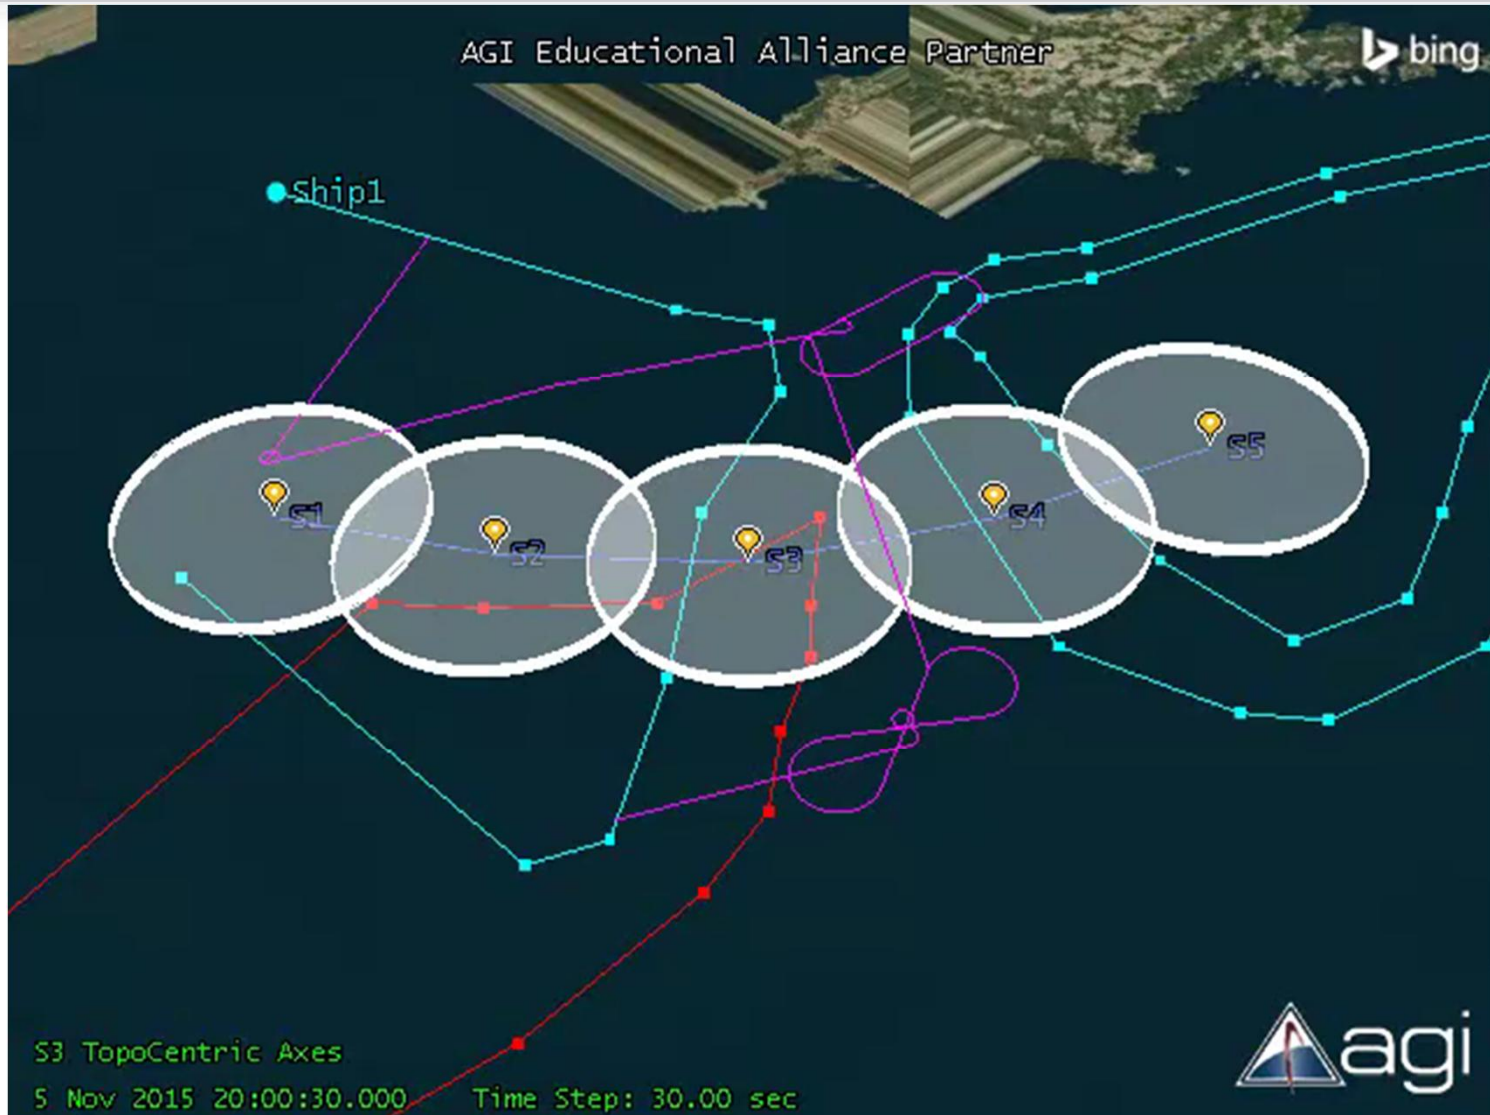

Wireless Mesh Network (WMN) are multi-hop peer-to-peer wireless network in which *nodes connect with redundant interconnections* and cooperate with one another to route packets.

- The entire wireless mesh cloud becomes one (giant) ethernet switch
 - Perfect for short-term and opportunistic/delay-tolerant networks

Mesh Network Modeling

Man Portable Units (Quad Radio & MPU4) Peer-to-Peer MANET

- Proprietary Wave Relay Layer 2 Routing
- Simultaneously support voice, video streaming, IP data, PLI

NETWORKING

- Seamless layer 2 network connectivity.
- Industry leading Wave Relay® MANET routing.
- 802.11a/b/g AP compatible with MANET.
- Integrated serial-to-Ethernet capability.
- Cursor-on Target.
- Wave Relay® over IP (WRoIP)
- Dynamic Link Exchange Protocol (DLEP) Certified.
- IPV4 and IPV6 compatible.
- Integrated DHCP server.
- Advanced multicast algorithm.

SECURITY

- Integrated hardware cryptographic accelerator.
- FIPS 140-2 (Up to level 2).
- Utilizes all Suite B algorithms.
- Anti-tamper mechanisms.
- AES-CTR-256 with SHA-512 HMAC.
- Over the air re-keying.

ANDROID(TM)

- Multicast Video, position locator and chat in a Android application.
- Supports commercial/custom phones and tablets.
- Provides power through USB tether.

WR Frequency Range	WR Output Power
907-922 MHz	27dBm/500mW
2312-2507 MHz	28dBm/600mW
2412-2462 MHz	28dBm/600mW
5180-5320, 5500-5700, 5745-5825 MHz	28dBm/600mW
2312-2507 MHz	33dBm/2W*
1352-1387 MHz	27dBm/500mW
4400-4800 MHz	25dBm/320mW
4800-4985 MHz	26dBm/400mW

TW-225 CheetahNet Mini Infrastructure-less MANET

- Dynamic Network Architecture at MAC layer and above
- Barrage Network Relay
- Simultaneously support voice, video streaming, IP data, PLI

PHYSICAL

Size (w/o Accessories): 4.0' x 2.5' x 0.9'

Weight (w/o Accessories): 10 oz

Environmental: MIL-STD 810G, 2 Meter Immersion

Power In/Out: External Power Supply, 6-18 V DC

Battery Run Time: > 10 Hours

Data Interfaces: Ethernet (RJ-45), USB mini A/B

NETWORK

Transmit Power: 2 Watt

Operating Frequencies: 1775-1815 MHz, 2200-2250 MHz

Network Throughput: Up to 8 Mbps

Encryption Security: AES-256

Range: (26 miles per hop) x (8 hops) = 208 miles network wide

PTT Voice Channels: Up to 12 channels

Occupied Bandwidth: 4-20 MHz

Data Handling: IPv6 or IPv4

Highband Networking Radio (HNRv2)

ATH or OTM mesh networking

- Dynamic Network Architecture at MAC layer and above
- 802.11g OFDM physical layer
- Black or colorless ad-hoc network backbone
- ATO

HNRv2 Capability and Implementation

Performance Parameter	Capability
Radio (BPU) SWaP	½ ATR form factor (4.9"x8.5"x14.2") 14 lbs +20 to +33 Vdc 180 W
Highband RF Unit (HRFU) SWaP	20" x 20" x 15" 60 lbs +20 to +33 Vdc 90 W
Current Band	C-band (4.5 to 4.99 GHz)
Occupied Bandwidth	22 MHz
RF Coverage	Full hemispherical
Tiers	Air and ground
Operational Modes	Warm-up Silent Watch; MANET operation
Network Modes	Point-to-Point; MANET; Managed Topology
Network Size	Easily supports battalion-size network configurations
Router	Internal to BPU, MANET IOS OSPF or EIGRP router protocols PPPoE OSPF.v3 interfaces
AES TRANSEC Cover	AES 256 bit; AES FIPS 197 certified FIPS 140-2 Level 2 certified
Modem	TDD/TDMA OFDM
Modulations	BPSK, QPSK, 16 QAM, 64 QAM with ½ and ¾ rate coding
Data rate adaptation	8 burst rates from 6 to 54 Mbps
Range	Ranges up to 30 km
Environmental	
Sheltered Equipment	+20°F to 110°F (extended temp option available)
Antenna	-35°F to 120°F (includes full solar loading)
Antenna Electronics	-35°F to 120°F (includes full solar loading)
Reliability: MTBF	>6500 hrs (based on actual performance)

- CENETIX
 - WMD-ISR
 - MIO and SSE operations
- Crete 2015
 - MIO/CWMD SA sharing in littorals
- SF Bay 2015
 - CWMD SA sharing and C2 in littorals
 - Mesh network management decision support

MANET Monitor

Nodes in Network: 8
Only nodes with Wave Relay SA enabled and heard in the last 30 seconds will appear in the MANET Monitor. A dash '-' indicates data is unavailable or not applicable.

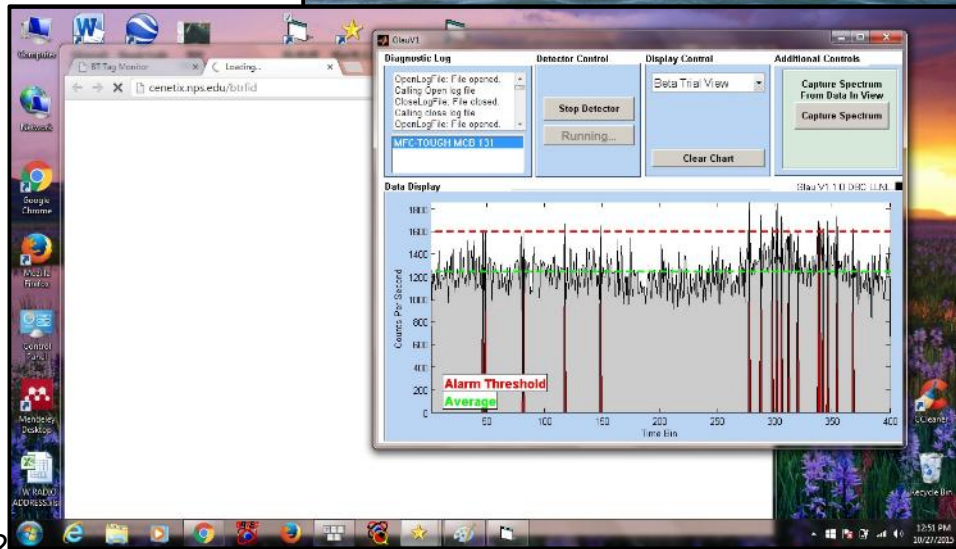

Serial	Node	Vector	Altitude	Neighbors	Battery	Receive SNR	Reverse SNR
14697	CNTX-MPU-1 (192.168.137.81)	1.4 mi SE	88 ft	6	67 %	32 dB	23 dB
14657	CNTX-MPU-2 (192.168.137.82)	1.1 mi SSE	-16 ft	4	71 %	27 dB	13 dB

- Rapid deployability
- Quick adaptation to dynamic environment
- Tactical-level resilient connectivity for localized battlespace awareness
- Lower probability of interception/detection
 - Directional antennas
 - “Smart” physical layer (e.g. beam-steering, transmit power optimization, etc.)
- Improve interoperability
 - Ship-to-shore movement
 - Surface Action Group operations
 - Allies and partners

- Strengthen mesh using deployable sensor networks and unmanned systems (UxVs)
- Improve UxV C2 ecosystem
 - Robust control and data links
 - Expand network with UxV nodes
- Reduce reliance on overhead assets
 - Soft GPS trilateration in denied environments
- Flexibility to integrate legacy and next-generation networking concepts (e.g. optronics, projectile-based networks, cubesat, etc.)

MIO-JIFX 2014 BT Experimentation

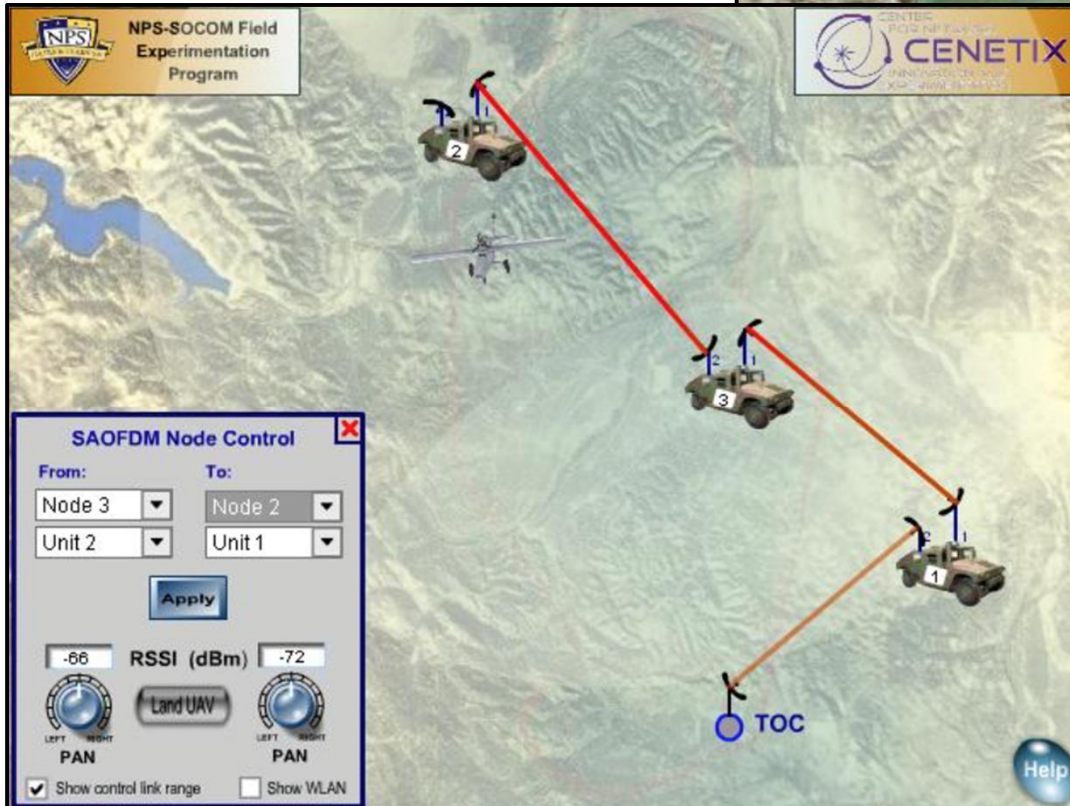

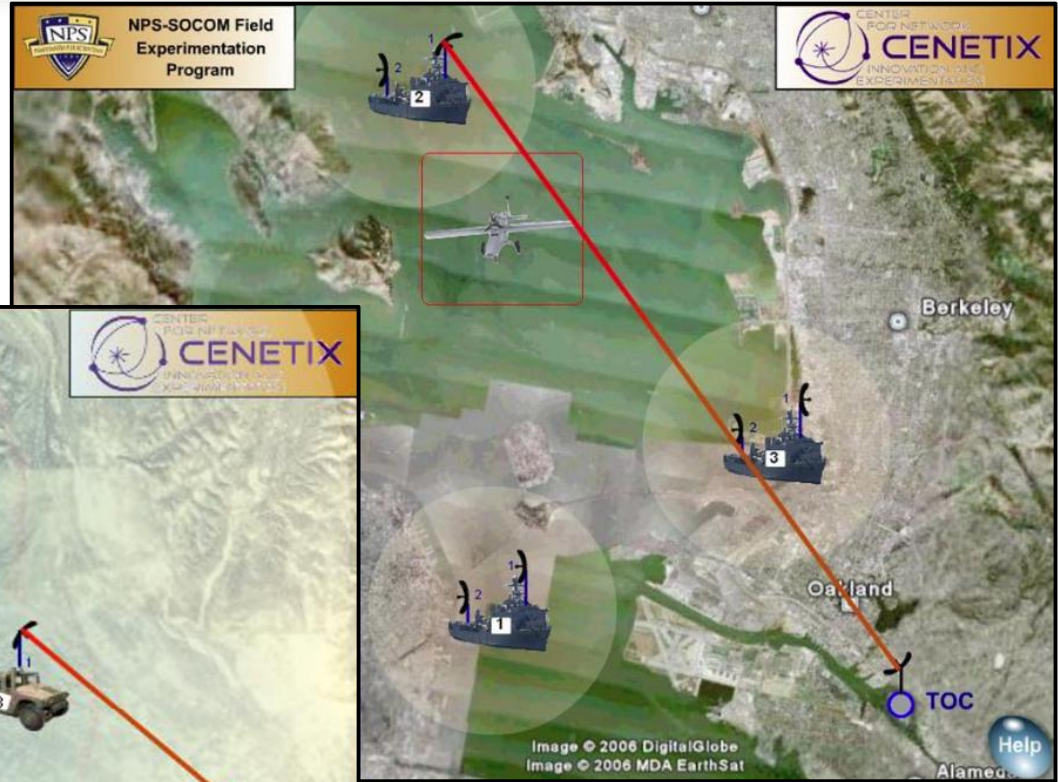

12/4/2015

- Monitor the “health” of the network
- Determine when intervention is required
- Detect problems
 - Equipment failures (often hidden by the self-repair feature of the network)
 - Intruders
- Manage the system

Network-on-Target 2006

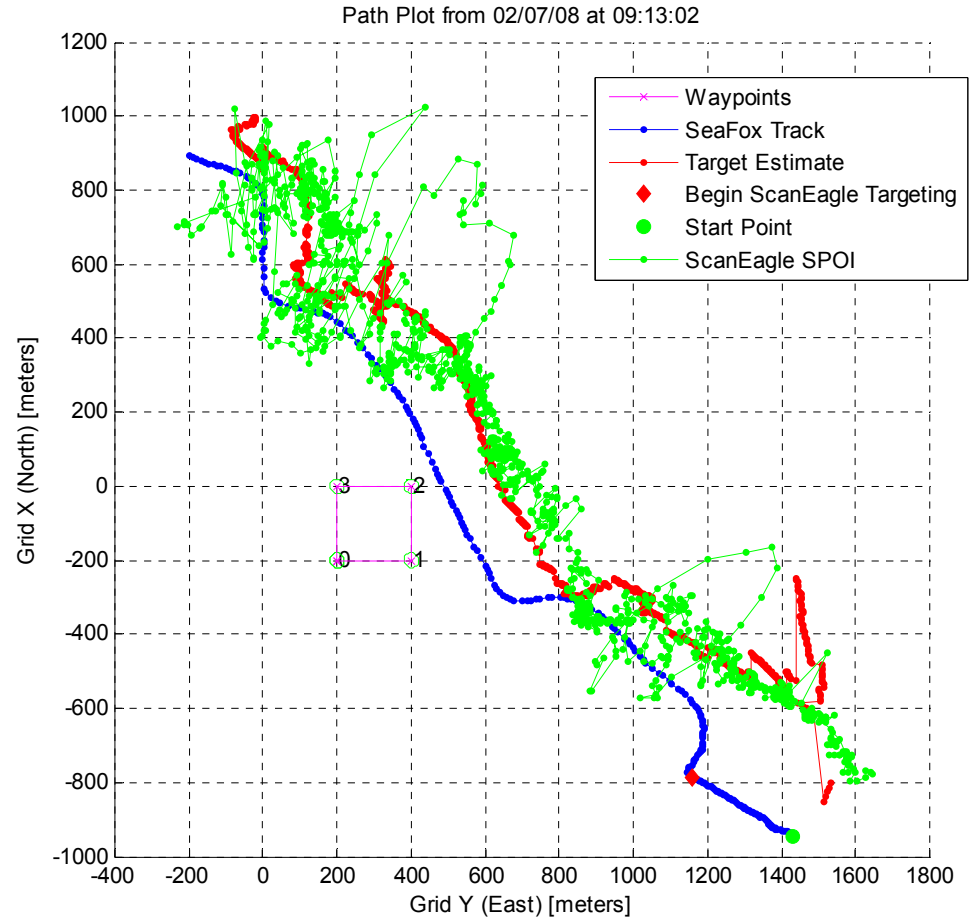

Figure 3: Track Plot from Collaborative MIO Experiment

- Users + routers = nodes
- Nodes have two functions:
 - Generate/terminate traffic
 - Route traffic for other nodes

- Routing – Physical

- Link quality feedback is shown **often** to help in selecting stable, high bandwidth, low error rate routes.
- Fading signal strength can signal a link about to fail → **preemptive** route requests.
- Cross-layer design essential for systems with **smart antennas**.

- Routing – MAC

- Feedback on **link loads** can avoid congested links → enables load balancing.
- **Channel assignment** and routing depend on each other.
- MAC detection of new neighbors and failed routes may **significantly** improve performance at routing layer.

- **Routing – Transport**
 - Choosing routes with low error rates may improve TCP throughput.
 - Especially important when multiple routes are used
 - Freezing TCP when a route fails.

- **Routing – Application**
 - Especially with respect of satisfying QoS constraints
