Our Courses

EAG's energy security courses raise awareness of the criticality of energy's role in national security and the fragility and vulnerabilities of operational energy in military operations—operational energy being the energy required to train, move, and sustain military forces and weapons platforms for military operations.

Our courses educate leaders and planners on how to shape energy strategies, policies, and plans that incentivize energy effectiveness, increase operational reach and endurance, enhance mobility and freedom of action, and reduce operational risk.

Course participants learn how to:

- Analyze energy as a strategic security issue
- Analyze links between energy/conflict, energy/security, and energy/geopolitics
- Analyze the strategic importance of energy security from a regional perspective
- Assess critical energy infrastructure vulnerabilities and the cross-cutting nature of hybrid threats such as cyber and terrorist attacks on energy infrastructure
- Evaluate energy supply as a challenge in military operations
- Evaluate new technological solutions and their role in enhancing energy efficiency in the military
- Understand the importance of energy as a key enabler of operational capability as well as its potential to be a critical weakness

Potential course topics include:

- Energy security strategic overview
- Energy security in the supply chain
- Geopolitical energy issues
- Critical energy infrastructure protection
- Energy diversification
- Energy awareness and behavior change
- Energy economics
- The nexus of energy security and cyber-security
- Renewable energy at military bases and for the warfighter
- Energy logistics in warfare operations
- Case studies analyses
- Table top exercises / wargaming
