Technologists + Ethics

More relevant than ever

- Emerging technologies raise complicated legal, ethical, and social questions
- The environment in which APL and our sponsors work has increasingly greater societal interactions
- As a trusted agent we need to think about the implications of technology and help develop it in alignment with our values
- Technologists must be part of the discussion early-on

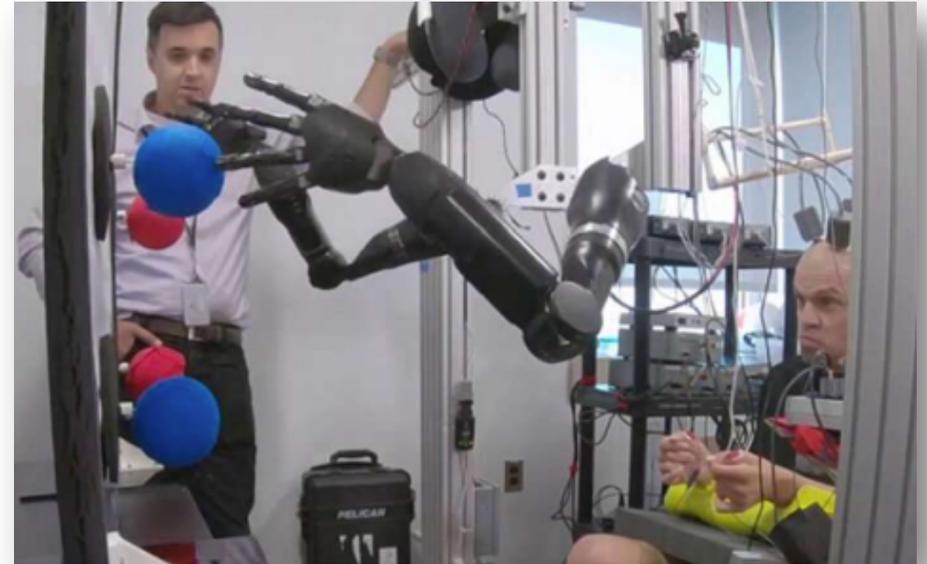

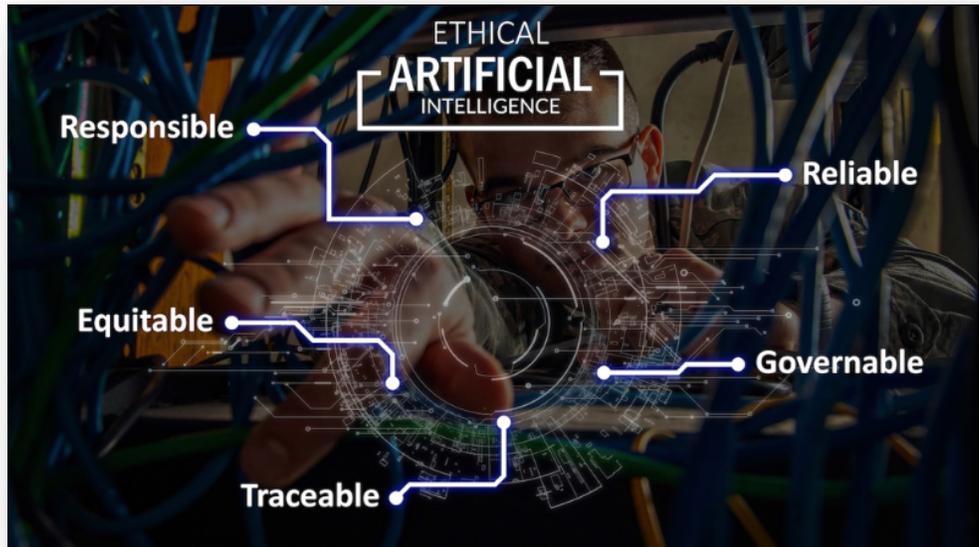

But wait...what do you mean by 'ethics'?

- Less about the label
- Not about getting versed in ethics
- It's about identifying as a stakeholder in shaping the impacts of AI on end-users and society
- ...and finding ways to make that easier to do
- It's about empowering those developing technology to make it better
- *Not* about making it “right”

Implementing Ethics
