Center on Combating Hybrid Threats

Naval Postgraduate School

Mission

The Center on Combating Hybrid Threats (CCHT) coordinates and conducts interdisciplinary research, education programs, and outreach in order to enhance Naval Postgraduate School (NPS) students and partners with the strategic, operational, and technological means necessary to detect, deny, disrupt, degrade, defeat and ultimately deter hybrid threats.

Naval Postgraduate School campus in Monterey, California

Vision

The purpose of the center is to focus on both anti-hybrid threat measures and countering hybrid operations by:

- **developing** novel, collaborative, relevant, and innovative research and educational activities related to hybrid threats that emanate from state and non-state actors;
- **offering** an array of strategic and technical expertise that can be leveraged to address security challenges our nation faces from adversaries that seek to execute hybrid operations against us and our allies;
- **collaborating** with NPS students, broader DOD, academia, and other partner organizations in order to further the NPS mission of advancing the operational effectiveness, technological leadership, and warfighting advantages of the Naval service.

The CCHT's end state is to become the DOD center of excellence on combating hybrid threats that collaborates with interagency and international partners.

Pillars

The three primary pillars of CCHT are Education, Research, and Outreach.

Education

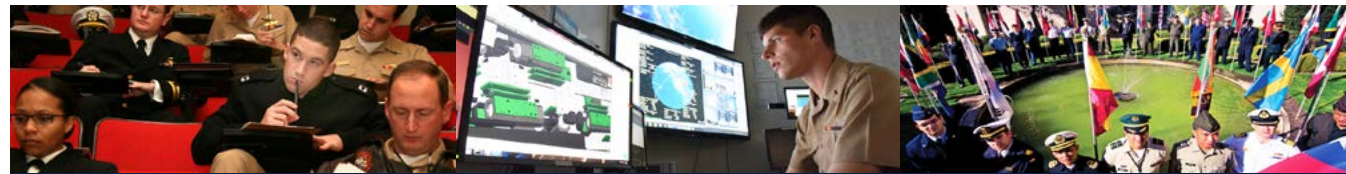

NPS offers an array of academic offerings for resident, non-resident, and distance learning students seeking graduate level education related to hybrid threats and hybrid warfare. The CCHT is currently assessing a number of potential academic offerings such as new certificates, joint master's programs, and Executive Education courses.

Research

The CCHT conducts and coordinates collaborative, relevant, and innovative research related to state and non-state hybrid threats by leveraging the interdisciplinary expertise of Center members and partners.

Outreach

The CCHT actively explores and enhances hybrid threat education and research partnerships throughout DOD and with other U.S. government agencies, academia, industry, NATO allies and international partners. The focus for outreach programs encompasses short courses, workshops, seminars, tabletop exercises, and wargames.
